FORCEFIELD PERFORMANCE

Forcefield Performance: The home of Forcefield Body Armour® & Forcefield Climate Control®

Forcefield Performance specialise in Impact Protection and High Performance Clothing Systems. We pride ourselves on developing and producing cutting edge, innovative and class leading products.

Winning countless awards and glowing reviews Worldwide, our brand continues to grow in popularity across many industries and sports.

Forcefield Mission Statement:

To be the first choice optimum-performance protective product for all sports where impact is a constant threat.

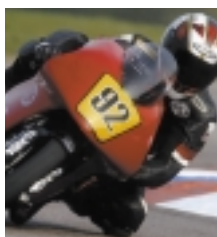

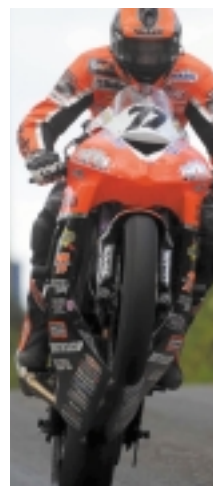

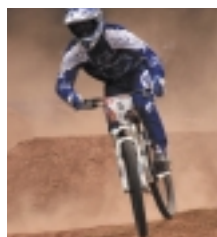

We seek to achieve this with a rolling development programme, producing radical new materials and designs that clearly differentiate us from our competitors. Our performance, quality, innovation and compliance to strict PPE Directives are further augmented by the very highest standards of customer service and integrity.

Visit www.forcefieldperformance.com and follow our links to YouTube, Twitter and Facebook to keep up to date on all things Forcefield.

Forcefield Performance products are trusted throughout the World in:

- Motorcycling
- Mountain Biking
- Mountain Boarding
- Karting
- Powerboating
- Snow Sports
- Kite Buggy
- Kite Surfing
- Jet-skiing
- Equestrian and more

Whatever your sport, Forcefield have you covered.

Forcefield are privileged to work with many professional sports stars. Heroes from the past, present and rising stars in all fields choose Forcefield to protect their most precious assets. Themselves.

Technology

All Forcefield Body Armour® is fully CE approved. This is the core of our market-leading strategy: maintaining a credible product, with proven performance.

CE testing standards for limb and back armour take into account the products' comfort and ergonomic functions, as well as their all-important protection levels. Armour that conforms to CE standards is declared to be proven in reducing the incidence and severity of injuries. Forcefield's Pro Sub 4 Back Protector, for instance, has achieved an astonishing and repeatable 3.38kN impact measurement.

With authentic CE approved limb or back protection, the end user can be confident that extensive research and testing has gone into the development of the product that they have chosen to protect themselves, their friends or family and that it has been accredited by the leading authorised body.

Full details on individual Forcefield products' CE ratings can be found at www.forcefieldperformance.com

All Forcefield Body Armour® is fully CE approved.

Multi Density

By using a combination of specialised high-tech energy absorbing materials, we can provide protectors that are less bulky than our competitors whilst offering unrivalled protection.

Nitrex

This patented technology allows protection evenly across its surface. Most hard shell/plastic protectors' performance will vary across this area. You never know where the impact will strike!

Repeat Performance Technology

Our materials offer repeat performance technology, whereas hard shell protectors can only take one impact and should be discarded immediately after a fall.

Flexibility

A combination of Nitrex technology and multi-layers has enabled Forcefield to offer lightweight and flexible protectors. This allows the armour to flex with the body and not be restricted by it.

Breathability

The unique triangular Nitrex outer grid has been designed with special vent holes at the base for extra breathability and also reduces weight.

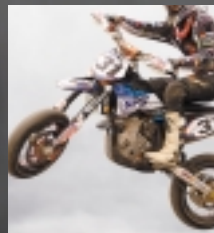

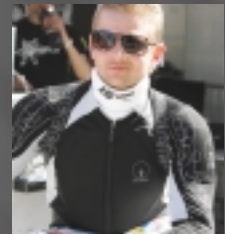

Nexton/Nylair

Nexton/Nylair is a hollow polyamide fibre with excellent thermal properties. The hollow fibre not only reduces weight but allows air to become trapped therefore further enhancing its insulation properties. Nylair is capable of keeping the wearer warm with one third less weight, creating a garment that is non-bulky but exceedingly breathable and thermally responsive.

Defender fabric

A key feature in our Tornado+ range, Defender fabric blocks airflow from the outside to maintain core temperature. It does this by reducing wind chill, whilst remaining breathable, and regulates the temperature of the fibre in order to retain a dry and warm micro-climate between the skin and the garment.
