<b>Balaclava – ONE SIZE ONLY</b>	<b>FBLB</b>	<b>KR. 199,00</b>
<b>Neck Tube – ONE SIZE ONLY</b>	<b>FBLN</b>	<b>KR. 249,00</b>

Inspired by geothermic phenomena observed on earth, BeCool™, the first polyamide fibre with integrated airflow control.

Forcefield Climate Control's technologically advanced range of underwear has an integrated "AIR FLOW CONTROL" function that maintains body temperature during sports and leisure activities.

The humid discharge function maintains body temperature whether the conditions are warm, cool, during exercise or relaxation keeping you dry, feeling fresh resulting in optimum comfort. Be Cool™ four channelled surface has a greater diffusive surface area, up to three times greater than cotton and up to twice more than other fibres making it more efficient in cooling the body. The section of Be Cool™ has 4 channels and a base that acts like a fan. This fan structure creates a perfect drainage channel to the exterior of the knit keeping the skin dry and the body regulated by moving the skins hot and humid air towards the outer surface away from the body.

It is further enhanced by its softness, lightness and silky touch creating a cool freshness to the skin, and combined with the seamless and flat seam technology, ensures that the fabric does not rub or chaff during activity. The garments have an antibacterial element build within to help maintain freshness.
