Engine guards

Conceived with the aim to provide side protection to the propulsors of trail bikes, the engine guard is today a very useful accessory also for riders of naked and custom bikes as well as of unfaired/semi-faired bikes. Should a fall of the motorcycle occur, for instance while on the stand, the engine guard may really reduce damages.

The wide range of engine guards developed and produced by GIVI includes specific solutions for a lot of bike models (for custom motorcycles they are available chromed).

The characteristics of the materials used offer an excellent result, guaranteed by the long GIVI experience.

technical details

Material: metal

Finished in black mat or chromed depending on the different motorcycle models

TN347 Yamaha TDM 900 (02>07)

TN453 Honda Hornet 600 (2007)
