

## Silencers exalting also scooters

Our MIVV CITY RUN line was created to increase the performance of 4-stroke scooters having a displacement of more than 50cc. The range is EC type-approved and then perfectly in line with European Directives.

From a technical point of view, the inside of the exhaust unit was designed to guarantee maximum torque at low speeds for an exhilarating use of the bike in an urban environment.

The employed material are the best: Carbon, Titanium and Stainless Steel. On the aesthetic level, the MIVV CITY RUN line is available in the classic oval and round version, but also in the new and exclusive GP and Suono shapes.
