

Full systems for race and road use

Limited dimensions, best features, easy installation and feather-light weight: these are exclusive characteristics of the new MIVV POWER line.

Complete groups belonging to this range, achieved perfectly following aims: exalting performances, giving a maximum fluidity to the power delivery and eliminating the medium speed gaps characteristic of the original systems.

These results have been reached thanks to design choices such as conical pipes, compensators and connecting tubes to improve the fluído-dynamics of the gases. The exhaust systems include also 1mm thick manifolds of AISI 304 Stainless Steel and special Titanium or Carbon silencers.

The POWER line offers very detailed aesthetical solutions, and two shapes: standard level, which keeps the original level of the bike, and high one, which eliminates footrest. This makes the bike more suitable to strong races.

MIVV POWER is available in the Homologated or Racing versions.

These complete groups, which are the result of the experience gained in the MotoGP world, are able to offer extraordinary performances.
