

Welcome in MIVV off-road world

ENDURO-MOTARD-CROSS

MIVV stronger line for ENDURO and MOTARD is developed with the aim of giving a maximum fluidity to the power delivery during the use of the power curve. In this way, the curve is always higher than that of the genuine system. The silencers are totally in compliance with the Racing provisions, with a noise level not higher than 94dB in the ENDURO and MOTARD models. The exhaust systems are available also in the type-approved version for road use. The aim of the CROSS line is to obtain the best at low-middle speeds, without disadvantaging the performances at high speeds.

All products guarantee reliability and endurance against the strongest stresses.

The exhaust systems are produced both as a slip-on system and as a full one. They are available in titanium and aluminium and can be equipped with spark arrestor system.

QUAD-ATV

MIVV STRONGER line for QUAD and ATV was studied for fans or professional riders interested to improve the performances of their own bike.

These exhaust systems confer a huge weight loose and a determined and cool sound.

The mufflers are available in the Homologated or Racing versions with titanium or alloy shapes.

All QUAD-ATV exhausts can be equipped with spark arrestor system.
